REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

None of the prior art of record shows or renders obvious the transmission of claim 1; the motion system of claim 37; and the method of 40, specifically:

Claim 1 requires a single engaging section and a single non-engaging section.

Claim 37 requires a primary engaging member comprising a first side having a single engaging section and a single non-engaging section.

Claim 40 requires the step of removing the teeth of the plurality of first adjacent gear teeth and the plurality of second adjacent teeth within the non-engaging semi-annular from the gear.

The claims of the invention specify a single engaging section and a single non-engaging section. The single engaging section may be designed to span a limited angular distance such that movement along the diameters of the plurality of engaging members does not translate into a significant difference in their angular orientation. This allows the plurality of engaging gears to properly engage with the single engaging section in any diameter and annular position. Thus, the single engaging section limited by a particular annular distance and using a plurality of engaging members to provide continuous engagement with the primary engaging member, results in a transmission system that can easily provide gear ratio changing without backlash, buckling or other engagement problems.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David M. Fenstermacher whose telephone number is 571-272-7102. The examiner can normally be reached on 10:30-7:00.
